

George

Most Reliable Enterprise AutoPilot

George combines the robustness of uAvionix low-SWaP DAL-C hardware with over a decade of open source innovation in UAS autopilot excellence.

Built on a familiar architecture

George is built on the trusted and proven CubePilot autopilot. Migrate your existing software and configuration to George's robust certifiable platform.

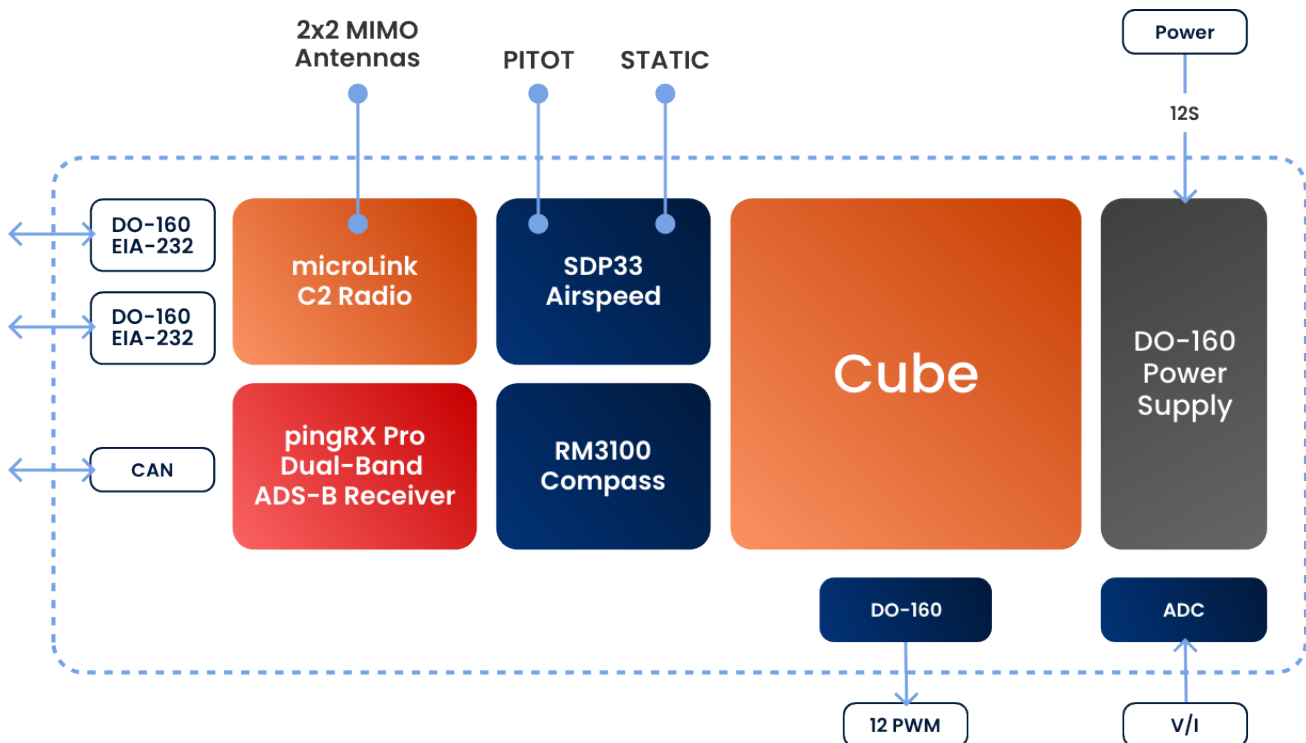

Hardened interfaces and power supplies

All interfaces are subjected to extensive testing for normal and abnormal power conditions, lightning, and interference rejection.

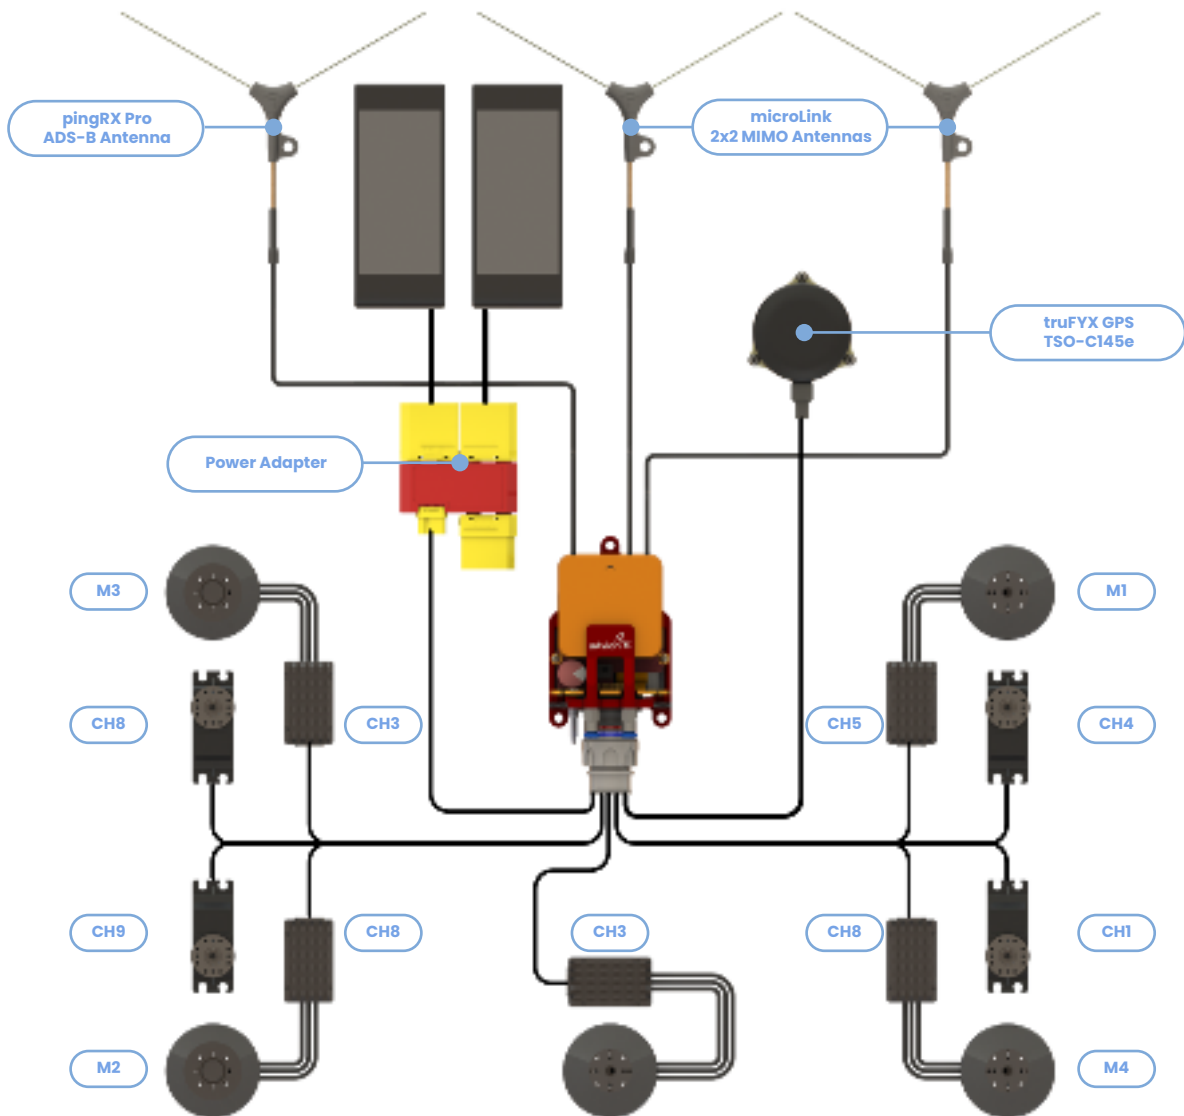

Certifiable and tested to aviation standards

George is engineered to DO-160G and MIL-810H environmental standards, and designed to meet DO-254 DAL C.
