

RADICALLY INNOVATING FOR
SAFE OPEN SKIES

BUILT FOR THE FIELD. TUNED FOR THE SKY.
**SITUATIONAL AWARENESS
YOU CAN WEAR**

In the field, your focus should be on the mission—not the mid-air threats. **skyAlert** is a rugged, *wearable* ADS-B receiver designed specifically for professional drone pilots operating in active airspace. By detecting cooperative aircraft via ADS-B on both 978 and 1090 MHz frequencies, skyAlert delivers real-time audible when crewed aircraft approach within a configurable zone.

skyAlert also reduces setup time and eliminates the need for bulky ground equipment. Its rechargeable long life battery and audible intrusion alarm make it the ideal companion for utility and first responder drone teams working hands on in complex or remote airspace. No more guesswork—no more distractions. skyAlert gives you the confidence to fly safer, maintain separation, and focus on mission objectives.

**GLOBAL ADS-B
AWARENESS**

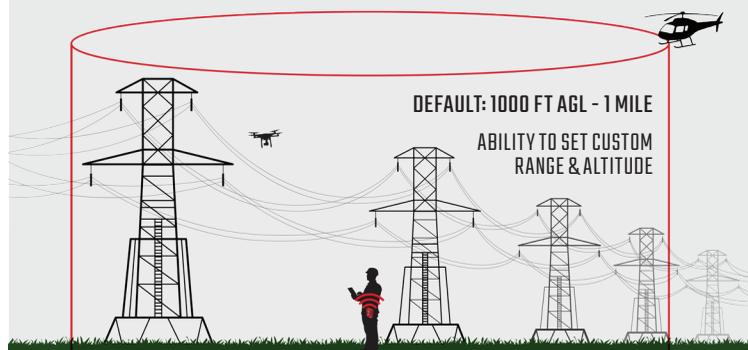

Detects both 978 and 1090 MHz ADS-B signals up to 20 miles away, providing complete coverage of cooperative air traffic anywhere on the planet.

**HANDS-FREE THREAT
DETECTION**

skyAlert easily attaches to a belt or shoulder strap through the included RAM™ universal clip. It produces **LOUD**, recurring audible alerts when aircraft enter the set safety perimeter—no monitors or ground stations required.

CUSTOMIZABLE ALERT ZONES

Set your own altitude and range thresholds to match every unique mission profile (up to 20 miles detection range).
